

MINING OPERATIONS

IN 2012, A MINING CONTRACTOR ENLISTED OUR EXPERTISE TO PROVIDE A SOLUTION to a systemic problem plaguing their operation during repair and maintenance intervals. The main body of the solution was to provide the customer with a colour-jacketed polyurethane cable and colour-coded molded ends that were to be run alongside black hydraulic hoses. During the repair and maintenance cycle, often times electrical lines would be mistaken for hydraulic lines and would be cut, which resulted in extra repair time. 3-Ci developed a polyurethane cable solution that ran alongside the hydraulic lines but were visibly different due to the colour-coding thereby saving precious time and money.

- ▶ Extreme environment handling and longevity
- ▶ Creative technology to aid in mining and oil and gas operations
- ▶ Customer-driven and focused on schedules and timelines
- ▶ Compliant to customer requirements
- ▶ In-house Solutions/Engineering team to work with each customer on problem solving and development

REDUCED FAILURE RATES
RESULT IN LONGEVITY
WHICH EQUATES TO TIME
AND MONEY SAVED
